

# Helmar H4000 SILICONE SPRAY

Offering a protective coating from the tip to the butt (less grips) Helmar's silicon spray when applied to clean salt free surfaces, assists in keeping expensive spinning, trolling, beach and estuary fishing rods in ship-shape condition. Simply applying a coating to the guides, fine droplets of silicon spray delivered from the 300g pressure pack, easily flows into every conceivable nook and cranny preventing salt water/spray from drying out and overtime causing problems such as corrosion.

Not only offering unbeatable protection

Helmar's non-staining silicon spray will not harm varnishes, binding or the rod blank itself. Offering the ultimate barrier between dissimilar metals as is often the case when mounting a reel to the winch base including alloy lock nuts, together with keeping your fishing rods looking like new for years with very little fuss.

Australian made quality, contact Helmar for your nearest stockist.
